

AI Governance

Primer on ISO/IEC 42001: AI
Management System

What is ISO/IEC 42001?

ISO/IEC 42001 is an international standard that provides requirements for an artificial intelligence (AI) management system. It is intended to help organizations develop, implement, maintain, and continually improve an AI management system that is aligned with their strategic objectives and that meets the needs of their customers and other stakeholders.

The AI Management System: Follows harmonized structure for ISO/IEC

Clause 4: Context of the Organization

- Understanding the organization's purpose, strategic direction, and external and internal context
- Determining the scope of the AI management system
- Identifying interested parties and their needs and expectations

Clause 5: Leadership

- Demonstrating leadership and commitment to the AI management system
- Establishing the AI policy and AI objectives
- Ensuring the integration of the AI management system into the organization's processes
- Allocating the necessary resources for the AI management system

Clause 6: Planning

- Establishing AI objectives and planning to achieve them
- Identifying risks and opportunities related to AI
- Determining the controls needed to address risks and opportunities

Clause 7: Support

- Providing the necessary resources, competence, awareness, and communication for the AI management system
- Establishing documented information for the AI management system

Clause 8: Operation

- Implementing the controls identified in the planning phase, including AI risk assessment, risk treatment, and impact assessment
- Operating the AI management system in accordance with the established processes

Clause 9: Performance Evaluation

- Monitoring, measuring, analyzing, and evaluating the performance of the AI management system
- Conducting internal audits to assess the effectiveness of the AI management system
- Management review of the AI management system

Clause 10: Improvement

- Continually improve the suitability, adequacy, and effectiveness of the AI management system.

All good (standard) stuff, but...

**... the real goodies come in
the Annexes.**

Annex A: Control Objectives and Controls

- Provides a reference list of control objectives and controls organizations can use to manage AI-related risks.
- Covers topics such as AI policies, data quality, system security, and human oversight.
- Organizations are expected to select and implement controls relevant to their specific context and risk profile.

Annex B: Implementation Guidance for AI Controls

- Provides detailed guidance on how to implement the controls listed in Annex A.
 - Offers practical advice on implementing controls such as establishing an AI policy, conducting AI risk assessments, and monitoring AI system performance.
 - Helps organizations understand the specific requirements of each control and how to effectively implement them.
- 

Some of our favorites...

A.5.2 - AI system impact assessment process

- The organization shall develop a process to assess the potential consequences for individuals, groups, and societies that can result from the AI system throughout its life cycle.

A.6.2.4 - AI system verification and validation

- The organization shall document its verification and validation measures for the AI system, including the specific criteria used for the assessment.

A.4.6 - Human resources

- The organization shall record details about the human resources and their skills used for the development, deployment, operation, change management, maintenance, transfer, and decommissioning, as well as verification and integration of the AI system.

**... and it's a great start
toward preparing for the
EU AI Act.**
